

MPD INDUCTION - AIRBUS

This application allows to transform the MPD data from Airbus excel file, to the structure required to be uploaded in AMASIS.

How to use it

When the tab of Airbus is active (red circle), it is possible to transform its MPD excel file by uploading the file on the input filed (orange circle). Finally, it is necessary to select the specific A/C model of the MPD (green circle). At this time, only the 320 and 330 A/C models are available.

The screenshot shows a web interface for 'MPD INDUCTION - AIRBUS'. At the top, there are three tabs: 'Airbus' (highlighted with a red circle), 'ATR', and 'Arkia'. Below the tabs is a section for 'Aircraft model' with two radio buttons: '320' (selected, highlighted with a green circle) and '330'. Below this is a file upload area with a 'Browse...' button and the text 'No file selected.' (highlighted with an orange circle). At the bottom, there are two buttons: 'TRANSFORM' (blue) and 'DOWNLOAD' (grey).

Once everything is set, the TRANSFORM button will become active, and by clicking it, the transformation will take place, and the file will be ready to download, by clicking on the now green DOWNLOAD button.

The output excel file will have all the columns required for the AMASIS excel file used to upload data, plus an extra column called COMMENTS, where it will be specific notations if applies (like is there are more access or zones than slots available to enter them, or title too long...).

With this excel file, it will be possible to copy and paste all the data to the AMASIS excel file to upload data. Be aware that the cells to copy from the result excel file will be all of them except the headers and the last column.

If there is some error during the process, or the buttons don't become active, first check that the excel file is the correct one and its format is also correct, and even if after that the problem persists, please contact the developer to fix the bug.
